VIVA HIGH POTASH COMPOUNDS

Viva High Potash Compounds are powdery fertilizers manufactured with great care to meet all the needs of plants from potash and other trace elements, it is: Which is:

- Rapidly absorbed by the plant.
- 100% very high solubility.
- This group contains a high percentage of potassium, in addition to other elements and trace elements.
- Increase the size of fruits and give the appropriate color ripeness.
- It contains a high percentage of potassium, which helps in the process of building proteins, and it is one of the main important elements that plants need from the beginning of the growing period until the end of the production period to improve the quality of fruits in terms of size, quantity, and taste specially (Tuber plants).
- It has a fundamental role in increasing the ion exchange in the soil solution and it is considered one of the basic and important elements in increasing the ion exchange and facilitates the absorption of elements.
- It has a role in building the cell and helps building energy in the cell; it is considered one of the basic elements in most of the vital cycles in plants.

Features of use:

- It is used during the fruit phase until the harvest to increase the size of the fruits and improve their quality, appearance and hardness.
- It helps to increase plant endurance and resistance to unsuitable conditions (frost, drought)Address the shortage of potash and trace elements, which leads to increase production.
- A high concentration of potassium leads to an increase in plant nutrition processes in general.
- Using it improves the processes of transporting sugars and the formation of starch in fruits.
- Increase the quantity and quality of production.
- It increases the fruit's resistance to injuries during storage and transportation. (It is used in all irrigation and foliar sprinkler systems.)

Packing: 1-10-20-25 kg
