

ALPHA ألفا

28-14-14+TE

ALFA COMPOUNDS (+N) HIGH NITROGEN

ALFA N+ are a high nitrogen suspension fertilizer compound manufactured with great care to satisfy all the plants needs of nitrogen, other elements and trace elements, as:

- Nitrogenous fertilizer that stimulates the root system of all plants in difficult weather conditions and in different types of soil.
- An easy, fast-absorbing and low-acid fertilizer, so that the plants become more fresh and green.
- Fertilizer is multi-source nitrogen that provides the plant with its needs for a longer period and thus an abundance of the crop.
- It plays a fundamental role in building chlorophyll molecules, activates many enzymes and stimulates the formation of plant hormones.
- Low pH, which helps reduce the acidity of the soil and increase absorbing the nutrients from the soil.

Features of use:

- It is used during the vegetative growth stages and the stages of plant development; it helps in forming a decent root system.
- Encourage the plant to form new strong branches and fruits.
- Because it contains high percentage of nitrogen, it encourages the vital processes of plants in general, because nitrogen is a major component in the synthesis of amino acids, which are the building units of proteins.
- Addressing the lack of nitrogen and trace elements, leads to increase the production.

Packing: 1-5-10-20 Kg
