

Hebron

Hebron Humic

13% Humic Acid + 3% Fulvic Acid + 4% k20

Chemical Composition (w/v):

Humic Acid:	13%	soluble in water
Fulvic Acid:	3%	soluble in water
Potassium (K_2O):	4%	soluble in water

Features:

- Hebron is a liquid fertilizer that improves soil structure, stimulates root growth, and increases nutrient availability to plants. It also enhances potassium absorption and promotes resistance to various stresses (heat, salinity, drought).
- Improves soil structure and increases its water retention capacity.
- Stimulates root growth and root system development.
- Increases nutrient availability and absorption, especially potassium.
- Enhances photosynthesis and increases fruit set and yield.

Packaging:

250 ml, 500 ml, 1 liter, 5 liters, 10 liters, 20 liters
